

VENTILATION, HEATING AND AIR CONDITIONING RECOMMENDATIONS

Air conditioning

3

We recommend use of the automatic regulation of the air conditioning.

It permits automatic and optimised control of all of the following functions: air flow, temperature in the passenger compartment and air distribution, by means of various sensors (exterior temperature, sunshine). This eliminates any need for you to change your settings other than the temperature value displayed.

- ☞ Please do not block the sunshine sensor **A**.

If you select the automatic mode (by pressing the "AUTO" control) and leave all of the vents open, optimum comfort will be maintained and humidity and condensation will be removed regardless of the exterior climatic conditions.

The temperature in the passenger compartment can only be lower than the exterior temperature if the air conditioning is on.

In order to be effective, the air conditioning must be used with the windows closed. If the vehicle has been parked in the sun for a long period and the interior temperature is very high, ventilate the passenger compartment with the windows open for a few minutes, then close the windows.

To keep the air conditioning system in good working order it is essential that it is operated at least once a month.

The air conditioning uses the engine power during its operation. As a result, the fuel consumption of the vehicle increases.

In certain cases of particularly arduous use (e.g. towing the maximum load on a steep gradient in high temperatures), switching off the air conditioning permits the recovery of engine power and therefore increases the towing capacity.

Air inlet

Check that the exterior grille for the air inlet, at the bottom of the windscreen, is clean and free of dead leaves, snow, etc.

When washing the vehicle using a high pressure nozzle, avoid spraying at the air inlet.

Air circulation

Maximum comfort is obtained by means of a good distribution of air in the passenger compartment, both in the front and in the rear.

To obtain a uniform distribution of air, take care not to block the exterior air intake grille located at the base of the windscreen, the vents, the air outlets under the front seats and the air extractor located behind the flaps in the boot.

The front and rear vents are fitted with thumbwheels to adjust the air flow and direction. We recommend that you leave all of the vents open.

Dust filter/Odour filter (active carbon)

There is a filter for excluding odours and dust.

This filter has to be changed in accordance with the vehicle maintenance schedule (see: "Maintenance and Warranty Guide").
