

Charger Light Installation

The Charger Power cable can be installed to the Art Design 12 watt Light. Other lights, including any with electronic dimmers or strobes, may be damaged if plugged into the Charger Power Cable. Check with the light manufacturer for compatibility. The lights will decrease the range of the bike approximately 10%.

The light is easy to install:

1. Remove Battery pack
2. Remove the Left side motor cover by removing the two #1 Philips screws from the aluminum receiver plate and the two 2.5 mm Allen screws (Figure 1).
3. Under the motor cover is a green colored receiver assembly (Figure 2).
4. Plug the straight end of the power cable (Figure 3) into the headlight jack on the bottom of the receiver assembly (Figure 2).
5. Zip tie the power cable to the seat tube of the frame to assure that it does not fall out of the jack.
6. Reinstall the motor cover.
7. Lead the power cable up the down tube towards the front handlebars.
8. Attach the Art Design or Cygo HiLux light to the front handlebars.
9. Plug the right angle end of the power cable
10. Replace battery pack on bike. Turn on the Charger Electric Bicycle by entering the Personal Identification Code into the keypad.
11. Press the switch on the light to turn it on or off. The Cygo HiLux has an additional push button switch to control the high beam.

into the light.

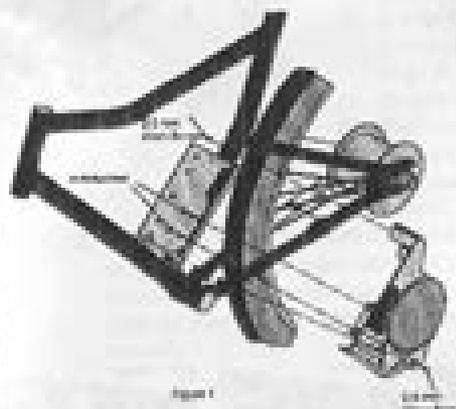

Figure 1

When the Charger Electric Bicycle runs low on power the Number 1 light will flash. At this point, you have only one or two miles (depending on terrain) of assist power left. When the battery runs very low on power the STDBY light will flash as well. Continued riding will cause the system, including power to the lights, to turn off completely. If this occurs, re-enter your PIN number to turn the system back on and leave the assist level in STDBY. This will allow the lights to continue working although it will reduce the life of the battery.
