Systems and their Control of Behavior is the third volume of the series The Natural History of the Crustacea This volume is
on the functional organization of crustacean nervous systems and how those nervous systems produce behavior It
complements other volumes on related topics of feeding biology reproductive biology endocrine systems and behavioral
ecology There is a rich history of the study of the neurobiology of crustaceans going back over 150 years This has included
studies on how their nervous systems allow them to perform behaviors that are adapted to their particular environments as
well as studying them as model organisms to understand basic biomedical principles about neural function such as sensory
transduction and processing synaptic transmission and integration neuromodulation and learning and memory The volume
has three sections that build progressively on each other The first section is on the basic organizational features of the
crustacean nervous system and the principles upon which it is built The second section is on sensory ecology the organization
of each sensory system and how it is used in intra and interspecific interactions within an ecological context The third section
uses case studies of how crustacean nervous systems are organized to perform complex behaviors and interactions such as
walking escape social interactions and memory and learning Taken together the 20 chapters synthesize our modern
understanding of the neural control of behavior in crustaceans based on the most recent technologies in physiological
recording molecular biology and computational science This volume will be useful to students and researchers as a concise
