Tools for the Job

TIRE LEVER

Tire levers are used to pry bicycle tires away from the rim without damaging the rim, tire, or tube.

SCREWDRIVER

A small Phillips head screwdriver will help in tightening and adjusting parts. Also have hex keys on hand to tighten bike joints.

DE-GREASER

... and fresh grease. This will fix squeaky spots or pivot points that are a little sticky. Also have oil on hand to keep your bike chain running smoothly.

RAGS & TOWELS

A fresh supply of rags will help keep your bike clean and free of dust and debris. Bikes also have handy specialized cleaning equipment such as chain cleaners.

Find the Problem

FLAT TIRE

- Remove the wheel from the frame. Deflate the tire.
- Use two tire levers to pry behind the rim. Set the levers about 6 in. apart, and pull the lip of the tire to the outside of the rim.
- Slide the tire levers away from each other to free the tire from the rim.
- Remove the tube. Now you can either replace the tube or patch the leak following a patch kit's instructions.
- Thread in the deflated tube and work the tire back onto the bike with the levers.

LOUD GEARS

- Loud, grinding or squeaky gears are often the result of poor chain maintenance.
- Clean the chain using a rag and de-greaser or a chain cleaner. Reapply chain lube to the chain.
- Also clean and re-grease chain rings.
- Test ride the bike. If gears are still loud or are not switching properly, it may be best to see a bicycle specialist at your local bicycle shop. Derailleur adjustments are subtle and finicky.

BRAKE SQUEAKS

- Squeaky brakes occur when brake pads are worn or aligned improperly.
- Examine the brake pads. If they are worn past the grooves they need to be replaced. Purchase new pads and follow directions for installation.
- If brake pads aren't worn, clean the wheel of debris and residue. Test ride.
- Still squeaking? Your wheel may be unbalanced. You can do this yourself, but it is a subtle process. Seek advice from a bike specialist.

PREVENTION

- The most common repairs bike shops perform are flat tires. Getting a flat is easily preventable—simply check tire pressure occasionally. Most flats are caused by riding on improperly aired tires.
- Keep your bike out of the elements. Rain can quickly rust parts and corrode paint. Clean dirty parts.
- A rusty chain is OK, but avoid rust by keeping the chain clean and greased. Check a chain for any hairline cracks and replace if any are present.
