Cat For Year 9

Michael Brown

Cat For Year 9:

Child Development Michael Little, 2017-03-02 This book provides a good foundation for understanding influences on children's health and development. The volume brings together in a single reference source the world's leading thinkers on children's health and development. It sets out the basic concepts that underpin the study of child development and response to impairments to development including attachment changes in brain structure and resilience. The book explores the idea of life course development explaining how experiences at each stage in a person's life shape his or her future. It goes on to examine the relative contribution of societal, neighbourhood, school, family and individual influences to child well-being. This includes a look at the way these forces interact such as when genes shape environments and vice versa. The book summarises the evidence on the incidence and consequences of impairments to children's health and development covering both the majority of typical children and the minority who experience significant problems. **The Evangelical Repository**, 1858

Children, Schools, And Inequality Doris R Entwistle, 2018-03-05 Educational sociologists have paid relatively little attention to children in middle childhood, ages 6 to 12, whereas developmental psychologists have emphasized factors internal to the child much more than the social contexts in explaining children's development. *Children, Schools, and Inequality* redresses that imbalance. It examines elementary school outcomes, e.g. test scores, grades, retention rates, in light of the socioeconomic variation in schools and neighborhoods, the organizational patterns across elementary schools, and the ways in which family structure intersects with children's school performance. Adding data from the Baltimore Beginning School Study to information culled from the fields of sociology, child development, and education, this book suggests why the gap between the school achievement of poor children and those who are better off has been so difficult to close. Doris Entwistle, Karl Alexander, and Linda Olson show why the first grade transition, how children negotiate entry into full-time schooling, is a crucial period. They also show that events over that time have repercussions that echo throughout children's entire school careers. Currently, the only study of this life transition to cover a comprehensive sample and to suggest straightforward remedies for urban schools. *Children, Schools, and Inequality* can inform educators, practitioners, and policymakers as well as researchers in the sociology of education and child development. *Internal Revenue Cumulative Bulletin* United States.
