Concepts in Syngas Manufacture

Jens Rostrup-Nielsen, Lars J. Christiansen, 2011 This book provides a general overview of syngas technologies as well as an in depth analysis of the steam reforming process Syngas is a mixture of hydrogen and carbon oxides which can be made from hydrocarbons coal and biomass It is an important intermediate in the chemical industry for manufacture of ammonia methanol and other petrochemicals as well as hydrogen for refineries and fuel cells Syngas is playing a growing role in the energy sector because it can be converted into a number of important energy carriers and fuels Syngas catalysis creates new options and flexibility in the complex energy network The steam reforming process is the main technology today for manufacture of syngas It is a complex intermingling of catalysis and heat transfer with restrictions caused by secondary phenomena such as carbon formation Many of the principles are applicable for other gasification technologies of growing importance Concepts of Syngas Preparation aims to provide a comprehensive introduction to this complex field of growing importance and gives a detailed analysis of the catalyst and process problems This book also serves as an important link between science and industry by illustrating how the basic principles can be applied to solve design issues and operational problems

Advances in Hydrogen Production, Storage and Distribution

Adolfo Iulianelli, Angelo Basile, 2014-07-16 Advances in Hydrogen Production Storage and Distribution reviews recent developments in this key component of the emerging hydrogen economy an energy infrastructure based on hydrogen Since hydrogen can be produced without using fossil fuels a move to such an economy has the potential to reduce greenhouse gas emissions and improve energy security However such a move also requires the advanced production storage and usage techniques discussed in this book Part one introduces the fundamentals of hydrogen production storage and distribution including an overview of the development of

the necessary infrastructure an analysis of the potential environmental benefits and a review of some important hydrogen production technologies in conventional bio based and nuclear power plants Part two focuses on hydrogen production from renewable resources and includes chapters outlining the production of hydrogen through water electrolysis photocatalysis and bioengineered algae Finally part three covers hydrogen production using inorganic membrane reactors the storage of hydrogen fuel cell technology and the potential of hydrogen as a fuel for transportation Advances in Hydrogen Production Storage and Distribution provides a detailed overview of the components and challenges of a hydrogen economy This book is an invaluable resource for research and development professionals in the energy industry as well as academics with an interest in this important subject Reviews developments and research in this dynamic area Discusses the challenges of creating an infrastructure to store and distribute hydrogen Reviews the production of hydrogen using electrolysis and photocatalytic methods

Catalyst Deactivation 1999 B. Delmon,G.F. Froment,1999-09-22 Studies in catalyst deactivation play a major role in the identification of the real catalytic system in particular the structure and texture of the solid which is often in a metastable state as it is operated in the industrial reactor These studies also allow the identification of the experimental conditions which preserve this active and selective state This is crucial for a real understanding of catalysts and catalysis Another area of catalytic science concerns reactions kinetics which if properly determined are of paramount importance in the elucidation of mechanisms The behavior of the kinetics during aging and deactivation and an accurate modeling of the evolution of activity and selectivity are essential information for the process performance These are just two typical examples but quite generally the science of catalyst deactivation is going to be more oriented to fundamental issues Staged Catalysts for Millisecond Contact Time Reactions Srinivas Tummala,2000 **Handbook of Petroleum Refining Processes, Fourth Edition** Robert A.
