Miner, 2020-05-25 It s All Analytics The Foundations of AI Big Data and Data Science Landscape for Professionals in Healthcare Business and Government 978 0 367 35968 3 325690 Professionals are challenged each day by a changing landscape of technology and terminology In recent history especially in the last 25 years there has been an explosion of terms and methods that automate and improve decision making and operations One term analytics is an overarching description of a compilation of methodologies But AI artificial intelligence statistics decision science and optimization which have been around for decades

have resurged Also things like business intelligence online analytical processing OLAP and many many more have been born or reborn How is someone to make sense of all this methodology and terminology This book the first in a series of three provides a look at the foundations of artificial intelligence and analytics and why readers need an unbiased understanding of the subject The authors include the basics such as algorithms mental concepts models and paradigms in addition to the benefits of machine learning The book also includes a chapter on data and the various forms of data The authors wrap up this book with a look at the next frontiers such as applications and designing your environment for success which segue into the topics of the next two books in the series PC AI ,2000 Life Science Data Mining Stephen T. C. Wong,Chung-Sheng Li,2006 This timely book identifies and highlights the latest data mining paradigms to analyze combine integrate model and simulate vast amounts of heterogeneous multi modal multi scale data for emerging real world applications in life science The cutting edge topics presented include bio surveillance disease outbreak detection high throughput bioimaging drug screening predictive toxicology biosensors and the integration of macro scale bio surveillance and environmental data with micro scale biological data for personalized medicine This collection of works from leading researchers in the field offers readers an exceptional start in these areas Evidence-Based Technical Analysis David Aronson,2007 Evidence Based Technical Analysis examines how you can apply the scientific method and recently developed statistical tests to determine the true effectiveness of technical trading signals Throughout these pages expert David Aronson details this new type of technical analysis that unlike traditional technical analysis is restricted to objective rules whose historical profitability can be quantified and scrutinized Evidence Based Technical Analysis provides you with comprehensive coverage of this new methodology which is specifically designed for evaluating the performance of rules signals that are discovered by data mining Experimental results presented in the book will show you that data mining a process in which many rules are back tested and the best performing rules are selected is an effective procedure for discovering rules signals Jacket Spatial Pattern Dynamics in Aquatic Ecosystem Modelling Hong Li,2009-12-22 This book explores modelling approaches to represent spatial pattern dynamics of aquatic populations in aquatic ecosystems It combines models knowledge and data in different scales It demonstrates that including spatially distributed inputs retrieved from Remote Sensing images a conventional physically based Harmful Algal Bloom model can be enhanced and that Cellular Automat based models using high resolution photographs prove to be good in representing aquatic plant growth The book also develops a synthesis modellign framework that includes biological ecological growth and diffusive processes and a local effects in a conventional modelling framework Environmental Studies and Climate Change R C Sobti,Sandeep K. Malhotra,Kamal Jaiswal,Sanjeev Puri,2022-12-13 Currently anthropogenic activities have caused unprecedented destruction of the environment at alarming rates leading to undesirable alterations in air land and water The process of environment degradation has been accelerated by industrial processes which result in waste as well as over consumption of natural resources The ecological balance has been disturbed

and resources have shrunk All this has resulted in climate change which has emerged as a major concern in the 21st century Changes in the environment are driven by demand for energy water and food to raise the standard of living These are also responsible for climate change with contributions from deforestation and CO2 emissions from fossil fuels such as coal and petroleum The present volume discusses some of the main issues regarding environmental degradation and the causes as well as the impact of climate change which is impacting the ecosystem The effects of various pollutants causes of climate change with case studies on geochemistry and glaciers etc and measures to reduce the impact on biodiversity health etc are discussed in detail in its chapters In a nutshell this volume discusses in detail the following issues Anthropogenic and natural factors in environmental degradation Climate change history causes and threats to abiotic and biotic systems Case studies on the impact of climate change and living systems Mitigation and preparedness for the future *Proceedings of the ...
