Boeing 787 Flight Management Computer Users Guide:

Civil Airliner Flight Guidance Technology for Four-Dimensional Trajectory-Based Operation Guangwen Li, Shaobo Zhai, Qiuling Jia, 2024-09-16 This book focuses on achieving precision guidance and timely arrival in flight. The content comprehensively describes the civil aircraft flight guidance technology for four-dimensional trajectory-based operation. The main content of this book is the summary of the author's team's research work on flight management systems and flight guidance technology over the past decade, including flight plan analysis and transition path construction, four-dimensional trajectory planning and re-planning, high-precision flight guidance commands calculation, FMS landing system, etc. The theoretical methods described in the book have been verified by pre-research and practical engineering projects, which are of great theoretical significance and engineering application value. This book is used as a reference for engineers engaged in flight control, flight guidance, and flight management research, as well as Masters and Ph.D.s in related disciplines.

Human Performance on the Flight Deck Don Harris, 2016-12-05 Taking an integrated systems approach to dealing exclusively with the human performance issues encountered on the flight deck of the modern airliner, this book describes the inter-relationships between the various application areas of human factors, recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes. The relationship between areas such as pilot selection, training, flight deck design, and safety management is continually emphasised within the book. It also affirms the upside of human factors in aviation, the positive contribution that it can make to the industry, and avoids placing undue emphasis on when the human component fails. The book is divided into four main parts. Part one describes the underpinning science base with chapters on human information processing, workload, situation awareness, decision making, error, and individual differences. Part two of the book looks at the human in the system, containing chapters on pilot selection, simulation, and training, stress, fatigue, and alcohol, and environmental stressors. Part three takes a closer look at the machine, the aircraft, beginning with an examination of flight deck display design, followed by chapters on aircraft control, flight deck automation, and HCI on the flight deck. Part four completes the volume with a consideration of safety management issues, both on the flight deck and across the airline. The final chapter in this section looks at human factors for incident and accident investigation. The book is written for professionals within the aviation industry, both on the flight deck and elsewhere, for post-graduate students, and for researchers working in the area.
