

Chemistry of life unit study guide

Chapter 1: Major themes of biology

Vocabulary: DNA vs. genes vs. chromosomes, eukaryote vs. prokaryote, null vs. alternate hypothesis, control vs. experimental groups

Concepts:

Overall note: There is little in this chapter that will be tested directly on the first test. However, careful reading will help introduce themes and ideas that we will discuss later.

1.1 – Reviewing important themes in biology

-- skim the levels of organization in figure 1.3, thinking about what makes each level more focused as we zoom in?

-- contrast the reductionist and systems biology approaches for understanding properties of life ... what are emergent properties (we'll discuss examples throughout course)?

-- fig. 1.4 – BOTH prokaryotic and eukaryotic cells have a _____ and _____ (and ribosomes)

p. 4 – ONLY eukaryotic cells have _____, including a _____ around the DNA

-- p. 6 - 7 – reviewing basic genetics:

--carefully read the definitions of the terms **DNA**, **gene**, and **chromosome**, then fill in the three blanks with these terms in the diagram below

-- top right p. 6 – these segments of DNA are instructions for building _____ in cells (also review fig. 1.8 about gene expression and terms transcription and translation)

-- p. 8 - 9 – quick review of ecology:

-- contrast how energy moves through ecosystems with the movement of matter

Study Guide George Karleskint, 1991 **Biological Science** Biological Sciences Curriculum Study, 1963 *The Praxis Series Official Study Guide: Middle School: Science*, **The Cheating Cell** Athena Aktipis, 2021-09-07 A fundamental and groundbreaking reassessment of how we view and manage cancer When we think of the forces driving cancer we don't necessarily think of evolution But evolution and cancer are closely linked because the historical processes that created life also created cancer The Cheating Cell delves into this extraordinary relationship and shows that by understanding cancer's evolutionary origins researchers can come up with more effective revolutionary treatments Athena Aktipis goes back billions of years to explore when unicellular forms became multicellular organisms Within these bodies of cooperating cells cheating ones arose overusing resources and replicating out of control giving rise to cancer Aktipis illustrates how evolution has paved the way for cancer's ubiquity and why it will exist as long as multicellular life does Even so she argues this doesn't mean we should give up on treating cancer in fact evolutionary approaches offer new and promising options for the disease's prevention and treatments that aim at long term management rather than simple eradication Looking across species from sponges and cacti to dogs and elephants we are discovering new mechanisms of tumor suppression and the many ways that multicellular life forms have evolved to keep cancer under control By accepting that cancer is a part of our biological past present and future and that we cannot win a war against evolution treatments can become smarter more strategic and more humane Unifying the latest research from biology ecology medicine and social science The Cheating Cell challenges us to rethink cancer's fundamental nature and our relationship to it

The Genius of Trees Harriet Rix, 2025-09-09 A mind expanding exploration of how trees learned to shape our world by manipulating the elements plants animals and even humankind possessing agency beyond anything we might have imagined Astounding a true masterpiece Rix refuses to put herself much in the picture but through the scenes we glimpse an Indiana Jones figure who is both an eminent travelling scientist and a born writer The Telegraph For a supposedly stationary life form trees have demonstrated an astonishing mastery over the environment around them In *The Genius of Trees* tree scientist Harriet Rix reveals the inventive ways trees sculpt their environment and explains the science of how they achieve these incredible feats Taking us on an awe inspiring journey through deep history and unseen biochemistry across the globe Rix restores trees to their rightful station not as victims of our negligence but as ingenious stunningly

inventive agents in a grand ecological narrative Trees manipulate fundamental elements plants animals bacteria fungi and even humankind to achieve their ends as seen with oaks in Devon England shaping ecosystems through root networks and fungi and in Amedi Iraq changing sexes as they age laurel rainforests in the Canary Islands regulating water cycles and metasequoias in California influencing microclimates Some tree species have gone to extraordinary lengths to make sure their fruits reach large primates who can spread their seeds over vast distances while poisoning smaller and less useful mammals Others can split solid rock and create fertile ground in barren landscapes effectively building entire ecosystems from scratch And new discoveries are constantly coming to light research has shown that trees have an even greater role in preventing global warming than we thought trees at one time thought to produce methane actually consume it We share one world with trees and one need for survival This eye opening journey into the inner lives of nature s most powerful plant is a profoundly new and original way of understanding both the miracles trees perform and the glories of our natural world
