Lukacs,2007-11-17 G protein coupled receptors GPCRs constitute a large superfamily of proteins that have been historically well represented as drug targets As such many of the volumes within The Receptors series have focused their attention on receptor subfamilies in the GPCR superfamily e g adrenergic serotonergic dopaminergic While chemokine receptors are relatively young in terms of the knowledge that has accumulated regarding their roles in physiology and pathology it is clear that this GPCR subfamily is dwarfing all others with respect to the total number of receptors and their functional diversity The breadth of the chemokine field was not fully appreciated in the early days of chemokine discovery when the characterization of these molecules was largely a curiosity of a small set of biologists primarily interested in immunology Presently the field of chemokinology is quite diverse and it is nearly impossible to stay informed on all aspects of chemokine biology Nonetheless this book seeks to distill information regarding the molecular and cell biology physiology and pathology of chemokines and their receptors into a single volume providing an excellent resource for those entering the field or the most experienced chemokinologist seeking new insights In the chapters leading authorities consider structural and cellular aspects of chemokines and chemokine receptors and more notably discuss the roles of these molecules in a variety of disease states that transcend their classically defined roles in immunology
