

Biology Research Paper Format

The questions and hypotheses that initiate an investigation, the resultant data gathered, and the background information obtained by reading the literature will lead to conclusions. Your research paper presents these conclusions and the appropriate evidence (data and relevant literature). Before writing your report, construct an outline that logically presents the information to support your conclusions. Organize the data into tables and figures to present the evidence in a logical order. Many authors prefer to construct a draft by rapidly putting down ideas with little regard to sentence structure, and to make corrections later. Others prefer to make revisions as they proceed. Write the report with a target audience of other students with experience in biology equivalent to that of the class for which the report is written.

Proper use of English is considered paramount in grading. Your major responsibility is to make the reader understand exactly what you mean by using words with precision, clarity, and economy. Every sentence should be exact and say something of importance (no "padding"). Economy and accuracy require using straightforward English sentences (subject, verb, and object). Follow a consistent pattern of tenses. Although it is acceptable to write in either the active or passive voice, you should write in the active voice unless you have good reason to use the passive voice. Different biological fields and faculty may have specific requirements for tense or voice and *students should consult specific course instructions or instructors for these assignment details.*

Quotations are to be avoided (see below). All sentences should be based on your understanding of source material that you then write as your own original sentences in your own words. Failure to write in your own words or to change sentence structure and content to represent your own thinking and understanding of material is considered **plagiarism**. Sentences based on published material or information that is not generally known or is "common knowledge" should be cited in the text (*for example: A previous study found that calcium also impacted germination (Jones and Jones, 1982)*). More information on proper citation format is included later in this document. **When discussing the works of others, do not include extraneous information, such as first names, paper titles, or scientific affiliations.** See below for an example of proper paraphrasing:
