Locomotion and Movement Neural Control and Coordination Chemical Coordination and Integration *Critical Investigations Into Interns' Urban Teaching Apprenticeship Experiences* John Lockhart, 2009 A critical task for public school teachers is to build and maintain productive relationships with their students especially to facilitate learning That task is particularly important in preparing new teachers for urban schools because cultural differences between the majority of urban teachers and their students can complicate and impair those relationships Multicultural education literature often describes and analyzes preservice teachers typically white middle class not urban and often female who are entering urban environments as being resistant to learning about race and class That research has usually been conducted on preservice teachers in their coursework often in the lone required diversity course and apart from practice work in the schools This study is guided by the theory that in situations people rely upon the habits of thought feeling attitude and action they've developed through interaction with others and that people experience a strong continuity in the use of those habits during life Though these habits may help one to negotiate situations they may also be a hindrance especially in situations significantly different from familiar ones I studied three interns from white middle class suburban and rural backgrounds who were placed in urban high schools with many nonwhite students from working class backgrounds to examine this central question How did the three interns use the habits they formed as honors students in mainly white monolingual middle class rural or suburban schools and communities with their characteristics to forge conceptions and practices for teaching students in urban high schools and communities with characteristics that differ appreciably I conducted this study in the interns placements using classroom observations follow up interviews and data from university coursework to analyze the meaning of the interns' experiences for them I highlight how interns' habitual views of race and class were consistent with descriptions in the literature and impacted their practices However I also analyze an important dimension not often considered how interns' habits of being good students hindered their abilities to connect with their students who generally did not have the same positive attitude toward schools as the interns I then present a case study of each intern to analyze their teaching practices which mostly involved lecture worksheets and recitation In doing so I demonstrate how resistance was operating but also show a variety of factors that complicated interns' efforts to develop competence as teachers including their efforts to form relationships with their students I explore how the interns made sense of their situations in ways that negated issues of race and class Because the interns' struggles to learn how to teach included but exceeded the scope of the resistance argument I argue for a reconceptualization of resistance that recognizes it as an expected reaction when a piece of an intern's valued identity is under assault by experiences for which habits are largely unequipped to deal I argue that such a conceptualization can help teacher educators to work with interns more effectively as learners in very unfamiliar and uncomfortable territory I discuss some possible directions for teaching and research for teacher educators who undertake the charge of preparing future teachers to work with students from different backgrounds The dissertation citations

Foissner,David Leslie Hawksworth,2009-07-24 Conservation and biodiversity of protists The conservation of biodiversity is not just an issue of plants and vertebrates It is the scarcely visible invertebrates and myriads of other microscopic organisms that are crucial to the maintenance of ecological processes on which all larger organisms and the composition of the atmosphere ultimately depend Biodiversity and Conservation endeavours to take an holistic view of biodiversity and when the opportunity arises to issue collections of papers dealing with too often neglected groups of organisms The protists essentially eukaryotes that cannot be classified in the kingdoms of animals fungi or plants include some of the least known groups of organisms on earth They are generally treated as a separate kingdom commonly named Protista or Protoctista in textbooks but in reality they are a mixture of organisms with disparate affinities Some authors have hypothesized that the numbers of protists are not especially large and that many have extraordinarily wide distributions However the picture that unfolds from the latest studies discussed in this issue is different There are many species with wide ranges and proportionately more cosmopolitan species than in macroorganism groups as a result of their long evolutionary histories but there are definite patterns and geographical restrictions to be found Further some protists are linked to host organisms as mutualists or parasites and necessarily confined to the distributions of their hosts **Protists Biology 2004** Holt Rinehart & Winston,Holt, Rinehart and Winston Staff,2004
