[Assessments and Conservation of Biological Diversity from Coral Reefs to the Deep Sea](#) Jose Victor Lopez, 2023-11-30 Assessments and Conservation of Biological Diversity from Coral Reefs to the Deep Sea Uncovering Buried Treasures and the Value of the Benthos examines marine benthic habitats around the world that are linked by their physical location at the bottom of the oceans The book approaches deep sea marine biodiversity with perspectives on genetics microbiology and evolution weaving a narrative of vital expert linkages with the goal of protecting something that most people cannot witness or experience It provides a full assessment of biological diversity within benthic habitats from coral reefs to plankton and fish species and offers global case studies It is the ideal resource for marine conservationists and biologists aiming to expand their knowledge and efforts to the rarely seen yet equally important realms of the ocean and respective benthic species As these deep sea ecosystems and their species face

unprecedented threats of destruction and extinction due to factors including climate change this book provides the most current knowledge of this undersea world along with solutions for its conservation Compares and contrasts between shallow and marine habitats to reveal revolutionary connections and continuity Analyzes modern threats and gaps in biological knowledge regarding benthic communities Examines benthic biodiversity through vertical vs horizontal gradients Poses possible solutions for the conservation of benthic habitats and organisms Agrobiodiversity Management for Food Security Jillian M. Lenné, David Wood, 2011-02-01 Agrobiodiversity provides most of our food through our interaction with crops and domestic animals Future global food security is firmly anchored in sound science based management of agrobiodiversity This book presents key concepts of agrobiodiversity management critically reviewing important current and emerging issues including agricultural development crop introduction practical diversity in farming systems impact of modern crop varieties and GM crops conservation climate change food sovereignty and policies It also addresses claims and misinformation in the subject based on sound **Economic Valuation of Biodiversity** Bartosz Bartkowski, 2017-05-18 This book provides an ecological economic perspective on the value of diversity in ecosystems Combining insights from various sub disciplines of ecology and environmental ecological economics the author constructs a conceptual framework which identifies the ways in which biodiversity influences human well being are identified and offers a novel unifying perspective on the economic value of biodiversity **Ocean Ecology** J.
