1. (Big Idea 3: Information Storage, Transmission, and Response = "Identifying Insulin as a Chemical Messenger" (p764)
 - a. Why did scientists have a difficult time isolating insulin initially? Scientists had a difficult time because enzymes in the digestive juices destroyed insulin, a type of protein during the isolation process.
 - b. How did they: Banting and Best, isolate insulin? They tied off the pancreatic duct which led to the destruction of digestive juices and not the production of insulin.
 - c. What were the four experimental procedures they used to identify that insulin was a chemical messenger? Four experimental procedures are identifying the source of the chemical, identifying the effect to be studied, isolating the chemical, and showing that the chemical has the desired effect.
 - d. How is insulin synthesized today? Insulin today is synthesized using recombinant DNA technology, using the bacterium E. coli to produce the hormone.
