**A Theory of Global Energy Governance** Frédéric Sourgens, 2025-09-04 Energy governance today is at a crossroads. Faced with the pressing issues of energy security, climate change, and the cost of energy, policymakers must grapple with how to achieve critical outcomes in an increasingly tumultuous world. A Theory of Global Energy Governance offers the first unitary and interdisciplinary theory of global energy governance that explains the interlinkage between domestic and global energy decision-making processes. It lays out a new path to resolve global energy geopolitical tensions grounded in a shared sense of belonging within the global energy commons. Part I explores the theoretical relationship between development and energy systems. Part II presents an understanding of energy governance as founded on a bond of energy belonging, contrasting with the prevailing realpolitik approach. In Part III, Sourgens reimagines the role of institutions in the global energy system to harness the benefits of deeper energy cooperation. Finally, Part IV furthers the discussion of the global energy commons by highlighting the unique position and potential of energy systems to steer the world towards a broader conception of the common good.

[The Long Battle for Global Governance](#) Stephen Buzdugan, Anthony Payne, 2016-01-08 The Long Battle for Global Governance charts the manner in which largely excluded countries, variously described as ex-colonial, underdeveloped, developing, Third World, and lately emerging, have challenged their relationship with the dominant centres of power and major institutions of global governance across each decade from the 1940s to the present. The book offers a fresh perspective on global governance by focusing in particular on the ways in which these countries have organised themselves politically, the demands they have articulated, and the responses that have been offered to them through all the key periods in the history of modern global governance. It retells this story in a different way and, in so doing, describes and analyses the current rise to a new prominence within several key global institutions, notably the G20, of countries such as Brazil, China, India, and South Africa. It sets this important political shift against the wider history of longstanding tensions in global politics and political economy between so-called Northern and Southern countries. Providing a comprehensive account of the key moments of change and contestation within leading international organisations and in global governance generally since the end of the Second World War, this book will be of great interest to scholars, students, and policymakers interested in politics and international relations, international political economy, development, and international organisations.
