**Documenting Software Architectures** Paul Clements,2003 Architecture is crucial to the success of any large software system but even a superb architecture will fail if it isn't communicated well Now there's a language and notation independent guide to capturing architecture so it can be used successfully by every analyst software designer and developer The authors review the diverse goals and uses of software architecture documentation providing documentation strategies for several common scenarios They identify the basic unit of software architecture documentation the viewtype which specifies the type of information to be provided in an architectural view For each viewtype Modules Component and Connectors and Allocation they offer detailed guidance on documenting what really matters Next they demonstrate how to package architecture documentation in coherent usable form augmenting architectural views with documentation of interfaces and behavior accounting for architectural variability and dynamic systems and more

**Documenting Software Architectures** Paul Clements,Felix Bachmann,Len Bass,David Garlan,James Ivers,Reed Little,Paulo Merson,Robert Nord,Judith Stafford,2010-10-05 Software architecture the conceptual glue that holds every phase of a project together for its many stakeholders is widely recognized as a critical element in modern software development Practitioners have increasingly discovered that close attention to a software system's architecture pays valuable dividends Without an architecture that is appropriate for the problem being solved a project will stumble along or most likely fail Even with a superb architecture if that architecture is not well understood or well communicated the project is unlikely to succeed Documenting Software Architectures Second Edition provides the most complete and current guidance independent of language or notation on how to capture an architecture in a commonly understandable form Drawing on their extensive experience the authors first help you decide what information to document and then with guidelines and examples in various notations including UML show you how to express an architecture so that others can successfully build use and maintain a system from it The book features rules for sound documentation the goals and strategies of documentation architectural views and styles documentation for software interfaces and software behavior and templates for capturing and organizing information to generate a coherent package New and improved in this second edition Coverage of architectural styles such as service oriented architectures multi tier architectures and data models Guidance for documentation in an Agile development environment Deeper treatment of documentation of rationale reflecting best industrial practices Improved templates reflecting years of use and feedback and more documentation layout options A new comprehensive example

**Experience Using the Web-based Tool Wiki for Architecture Documentation** Felix Bachmann,Paulo Merson,2005 Abstract In an organization that uses an architecture centric development approach it is the purpose of the software architecture especially the product documentation to guide all stakeholders who contribute in one way or another to the development of the product s Unfortunately in many organizations this documentation ends up on the shelves unused and collecting dust This happens in part because it is difficult to keep the architecture documentation current hard for nondevelopers to understand what the documents describe and challenging for nondevelopers to use the tools necessary to access the documentation This technical note discusses the benefits and challenges of using a wiki based collaborative environment to create software architecture documentation The findings are based on two experiences The first was that of a team of Carnegie Mellon registered trademark University Master of Software Engineering MSE program students that used the wiki tool in a real world software project For its customer the team had to produce and document the architecture of a system that will be developed by many geographically distributed teams The second experience was a study conducted by another MSE student to reconstruct and document the architecture of a multitier enterprise application using the wiki tool and UML 2 0
