

Animal Behavior – AP Lab 11

OVERVIEW In this laboratory, you will observe the behavior of an insect and design an experiment to investigate its responses to environmental variables.

*You also will observe and investigate mating behavior.

OBJECTIVES

Section A: Before doing this laboratory you should understand:

- the concept of distribution of organisms in a resource gradient
- the difference between a kinesis and a taxis

Section B: After doing this laboratory you should be able to:

- measure the effects of environmental variables on habitat selection in a controlled experiment
- * describe the different types of insect mating behaviors

**will be completed in genetics unit*

Objective A: Investigate orienting behaviors (kinesis/taxis) in pill bugs.

Design an experiment to determine a preferred environment for pill bugs in a resource gradient.

Write a prelab for your design

Prelab questions: answer in your lab book in appropriate section – see Writing a prelab to figure this out

- 1) What Phylum and Class do pill bugs belong to? What are some typical feature of organisms that belong these phyla/class?
- 2) Where would you expect to find pill bugs – and why? Complete these statements – Pill bug behavior will locate them in places that are..... This is expected because
- 3) What is a resource gradient?
- 4) What type of resource gradient will you providing for pill bugs to choose from in your experiment? (remember you will have a minimum of 4 chambers in your shoe box)
- 5) How do you expect the pill bugs to behave in your resource gradient and why?
- 6) What do the terms orienting behaviors, kinesis, and taxis mean? Do you expect to see these behaviors in this experiment – if so, when and how?
- 7) What other kinds of social behaviors/cognitive behaviors do you expect to see?
- 8) Now use the specifications below and **prelab outline sheet** (this was given separately – if you don't have it, don't panic – go to 'labs' page in website – you will see it there). to complete the different sections.

Read specifications for experiment given below carefully (you will lose significant points if these are not demonstrated in your procedure/data):

- a) You will need to bring in a **shoe box** per group. You will also need to **select and bring materials** for 4 environments that can be placed inside the shoe box. Remember you need to have a **resource gradient** in your shoe box.
- b) Resource gradient must be clearly quantifiable – this means the variable you choose must have a quantitative measure in the environments.
- c) You will need 15-20 pill bugs for one trial. (Turn and read on...)
