

Coding Guidelines

- Vascular and/or airway access are necessary for many invasive procedures. Pre-procedure or intra-procedure work includes the work necessary to secure the required access. The post-procedure work includes the tasks necessary to get a patient back to the proper post-procedure state.
- The endoscopic procedure is not separately reportable from the non-endoscopic surgery if it is carried out concurrently with it to make sure that no intraoperative injuries occurred or to confirm that the procedure was done appropriately.
- An operative procedure includes exposure to and investigation of the surgical field, which is not reportable independently. The existing protocols may typically be recorded separately if further research into a surgical area leads to additional surgeries beyond the main treatment. However, an operation that the **CPT code** descriptor identifies as a "separate procedure" is not separately reportable if it is carried out through the same skin incision, orifice, or surgical approach in a location that is anatomically connected to the other procedure(s).
