

After the leak test, apply insulating material tightly so that there is no gap.

Cover the connection part with tape to prevent water from leaking.

When the piping is to be attached to a wall comprised of tin plate or metal netting, use chemically treated wooden piece 25/32 inch (20 mm) or thicker between the wall and the piping, or wrap insulation vinyl tape around the piping.

To use existing piping, perform COOL operation for 30 minutes and pump down before removing the old air conditioner. Remake flare according to the dimension for new refrigerant.

Do not block the inlet of the outdoor unit with the excess part of the pipes.
