

Electromagnetism

If a coil of wire is wrapped around a metal object and connected to an energy source, the metal object will become magnetized, forming an **electromagnet**. The electromagnet will attract magnetic materials. Let's explore this idea!

Materials Needed:

- a large nail or iron rod (about 10cm [4in] long)
- a 6 volt battery
- 1 meter of electrical wire, with alligator clips at the ends
- paperclips

What to do:

1. Wind the wire around the nail, leaving the ends sticking out by about 10cm [4in].
2. Make a prediction about what you think will happen to the nail when you connect the battery. Record it on Worksheet 2.
3. Clip the alligator clips to the battery terminals.
4. Dip the nail into the paperclips, and pull it out. What happens?
5. Remove the battery. What happens?
6. Record your observations on Worksheet 2.
7. What conclusion can you make? Record it on Worksheet 2.
8. Make a connection about what you have learned. Tell about it on Worksheet 2.
