

14. Scientists are interested in determining the average number of species that have migrated from the mainland to a group of islands, as shown below. Partway through their study, they decided to include an additional island in their study group.

Based on the theory of island biogeography, which of the following best explains how the scientists' calculation of average number of species would change with the inclusion of this new island in their study?

- (A) The average would increase because more species would have migrated directly to the farther island.
- (B) The average would decrease because fewer species would have migrated directly to the farther island.
- (C) The average would not change because it is likely that the additional island has about the same number of species that migrated as the original island group.
- (D) The average would not change because the island is approximately the same size as those in the original group and therefore just as likely to recruit species from the mainland.

Energy We want it affordable we want it available in ample quantities and from reliable sources and we want it to be produced and used in ways that are safe and environmentally benign In other words we want plenty of energy too cheap to meter and with no impact on the environment Ha With a refreshing lack of bias this book dissects all major sources of energy from oil and coal to renewables like solar and wind power In an easy understandable style energy expert Joseph Dukert explains how each fits into the overall global energy mix that powers everything from automobiles and appliances to assembly lines and space stations As Dukert details all energy sources have pluses and minuses Those who champion any single energy source or even energy efficiency by itself as the sole answer to our energy problems are off track he argues as are the cynics who condemn one source or another or pooh pooh the threat of global warming In short we need every significant source of energy we have today while also making greater efforts to improve the efficiency of energy production and energy consumption Dukert also explores the choices made by individuals businesses and society as each group juggles conflicting interconnected factors affordability reliability adequacy of supply environmental concerns and time In explaining why there s no magic bullet solution to the energy crisis the author blends simple technical descriptions economics and real world politics Besides providing a cogent overview of a huge and hugely important industry this short comprehensive volume helps readers decide for themselves which choices are in their best interest As Dukert suggests energy independence is probably not a realistic goal for any country but the search for a dynamic practical energy balance can nonetheless result in a wiser national energy policy
