

Balancing Act

Name _____

Atoms are not created or destroyed during a chemical reaction. Scientists know that there must be the same number of atoms on each side of the reaction. To balance the chemical equation, you must add coefficients in front of the chemical formulas in the equation. You cannot add or remove subscripts.

- 1) Determine number of atoms for each element
- 2) Pick an element that is not equal on both sides of the equation.
- 3) Add coefficients in front of the element and adjust your counts.
- 4) Continue adding coefficients until you get the same number of elements on each side.

Philosophy of Science David Papineau, 1996 The aim of this series is to bring together important recent writings in major areas of philosophical inquiry selected from a variety of sources mostly periodicals which may not be conveniently available to the university student or the general reader The editor of each volume contributes an introductory essay on the items chosen and on the questions with which they deal A selective bibliography is appended as a guide to further reading The contributors ask whether we are justified in believing scientific theories and what attitude we should take to them if we are not Although few philosophers seriously question the existence of everyday objects like trees and tables many have real doubts about viruses electrons and gravitational waves The last two decades have seen important new work in the philosophy of science stimulated by sceptical attitudes towards scientific theories Scientific realists have in turn countered with arguments of their own resulting in a wide ranging debate drawing from many different philosophical disciplines The Philosophy of Science bridges the gap between both sides of the argument including articles on different species of realism and anti realism the underdetermination of theory by evidence the lessons of the history of science naturalized epistemology of science and Bayesian methodology
