## **Acs Orgo Exam 2013:**

**Relevant Chemistry Education** Ingo Eilks, Avi Hofstein, 2015-07-22 This book is aimed at chemistry teachers, teacher educators, chemistry education researchers, and all those who are interested in increasing the relevance of chemistry teaching and learning, as well as students' perception of it. The book consists of 20 chapters. Each chapter focuses on a certain issue related to the relevance of chemistry education. These chapters are based on a recently suggested model of the relevance of science education encompassing individual, societal, and vocational relevance, its present and future implications, as well as its intrinsic and extrinsic aspects. Two highly distinguished chemical educators, Ingo Eilks and Avi Hofstein, have brought together 40 internationally renowned colleagues from 16 countries to offer an authoritative view of chemistry teaching today. Between them, the authors in 20 chapters give an exceptional description of the current state of chemical education and signpost the future in both research and in the classroom. There is special emphasis on the many attempts to enthuse students with an understanding of the central science, chemistry, which will be helped by having an appreciation of the role of the science in today's world. Themes which transcend all education, such as collaborative work, communication skills, attitudes, inquiry, learning, and teaching, and problem solving, are covered in detail and used in the context of teaching modern chemistry. The book is divided into four parts which describe the individual, the societal, the vocational, and economic and the non-formal dimensions, and the editors bring all the disparate leads into a coherent narrative that will be highly satisfying to experienced and new researchers and to teachers with the daunting task of teaching such an intellectually demanding subject. Just a brief glance at the index and the references will convince anyone interested in chemical education that this book is well worth studying; it is scholarly and readable and has tackled the most important issues in chemical education today and in the foreseeable future. Professor David Waddington, Emeritus Professor in Chemistry Education, University of York, United Kingdom.

**Organic Chemistry Education Research into Practice** Jay Wackerly, Sarah Zingales, Michael Wentzel, Gautam Bhattacharyya, Brett McCollum, 2025-03-25 This Research Topic has three main goals: 1) provide a platform for instructors of organic chemistry to showcase evidence-based methods and educational theories they have utilized in their classrooms; 2) build new and strengthen existing connections between educational researchers and practitioners; and 3) highlight how people have used chemical education-based research in their teaching practice. There are places in the literature dedicated for chemical education research (CER), however, there is not a clear avenue for those that have changed their teaching methods based on published CER and report their experiences. Creating this article collection will foster collaboration between chemical education researchers and teachers of organic chemistry. This opportunity allows these instructors to share evidence-based practices, experiences, challenges, and innovative approaches from CER literature and beyond. This Research Topic bridges discipline-based education research and the scholarship of teaching and learning, which will help advance organic chemistry education and improve student outcomes. *Inclusive and Accessible Chemistry*

*for Further and Higher Education* Jane Essex, 2026-01-16 Chemistry and science more broadly should be welcoming and accessible to everyone with an interest. However, stigma and discrimination often colour the experiences of students with disabilities. With improved awareness and understanding of the functional needs of students with different types of disability, we can make chemistry in higher education accessible to all. Drawing on research evidence on approaches to inclusion and describing examples of the inclusion of chemistry students with differing types of disability, this book sets out what we know about successful inclusion. Wide-ranging accounts provide a discussion of barriers faced, helpful strategies and recommendations for improving accessibility and inclusivity in higher education.
