Artificial Neural Network-based Optimized Design of Reinforced Concrete Structures Won-Kee Hong, 2023-01-11 Artificial Neural Network based Optimized Design of Reinforced Concrete Structures introduces AI based Lagrange optimization techniques that can enable more rational engineering decisions for concrete structures while conforming to codes of practice It shows how objective functions including cost CO2 emissions and structural weight of concrete structures

are optimized either separately or simultaneously while satisfying constraining design conditions using an ANN based Lagrange algorithm Any design target can be adopted as an objective function Many optimized design examples are verified by both conventional structural calculations and big datasets Uniquely applies the new powerful tools of AI to concrete structural design and optimization Multi objective functions of concrete structures optimized either separately or simultaneously Design requirements imposed by codes are automatically satisfied by constraining conditions Heavily illustrated in color with practical design examples The book suits undergraduate and graduate students who have an understanding of collegelevel calculus and will be especially beneficial to engineers and contractors who seek to optimize concrete structures

Modern Prestressed Concrete James R. Libby,1990-11-30 This book was written with a dual purpose as a reference book for practicing engineers and as a textbook for students of prestressed concrete It represents the fifth generation of books on this subject written by its author Significant additions and revisions have been made in this edition Chapters 2 and 3 contain new material intended to assist the engineer in understanding factors affecting the time dependent properties of the reinforcement and concrete used in

prestressing concrete as well as to facilitate the evaluation of their effects on prestress loss and deflection Flexural strength shear strength and bond of prestressed concrete members were treated in a single chapter in the of flexural strength has third edition Now in the fourth edition the treatment been expanded with more emphasis on strain compatibility and placed in Chapter 5 which is devoted to this subject alone Chapter 6 of this edition on flexural shear strength torsional strength and bond of prestressed reinforcement was expanded to include discussions of Compression Field Theory and torsion that were not treated in the earlier editions In similar fashion expanded discussions of loss of prestress deflection and partial prestressing now are presented separately in Chapter 7 Minor additions and revisions have been made to the material contained in the remaining chapters with the exception of xv xvi I PREFACE Chapter 17 This chapter which is devoted to construction considerations has important new material on constructibility and tolerances as related to prestressed concrete
