Reconstructing School Mathematics Stephen I. Brown, 2001 This book offers a critique of two major themes of the modern reform movement in mathematics education problem solving and the applications of mathematics to the real world In examining the educational fallacy inherent in the impulse to move unflinchingly from problem to problem solving Stephen I Brown demonstrates the potential of mathematical reflection to reveal aspects of self and society that have been suppressed in curriculum He then argues that in seeking connections between mathematics and the real world we have tended to reduce their relationship to one of modeling Furthermore in constructing what is real in an overly concrete way we have lost sight of the wonder of what is real in both mathematics and the world Brown explores alternative text formats including that of the novel and the Talmud as vehicles to rejuvenate the educational potential of problems and of real world connections
