Polymer Composites Klaus Friedrich, Stoyko Fakirov, Zhong Zhang, 2005-12-06
The use of polymer composites in various engineering applications has become state of the art This multi author volume provides a useful summary of updated knowledge on polymer composites in general practically integrating experimental studies theoretical analyses and computational modeling at different scales i e from nano to macroscale Detailed consideration is given to four major areas structure and properties of polymer nanocomposites characterization and modeling processing and application of macrocomposites and mechanical performance of macrocomposites The idea to organize this volume arose from a very impressive workshop The First International Workshop on Polymers and Composites at IVW Kaiserslautern Invited Humboldt Fellows and Distinguished Scientists which was held on May 22-24 2003 at the University of Kaiserslautern Germany The contributing authors were invited to incorporate updated knowledge and developments into their individual chapters within a year after the workshop which finally led to these excellent contributions The success of this workshop was mainly sponsored by the German Alexander von Humboldt Foundation through a Sofia Kovalevskaja Award Program financed by the Federal Ministry for Education and Research within the Investment in the Future Program of the German Government In 2001 the Humboldt Foundation launched this new award program in order to offer outstanding young researchers throughout the world an opportunity to establish their own work groups and to develop innovative research concepts virtually in Germany One of the editors Z

Computational Contact Mechanics Alexander Konyukhov, Karl Schweizerhof, 2012-08-14 This book contains a systematical analysis of geometrical situations leading to contact pairs point to surface surface to surface point to curve curve to curve and curve to surface Each contact pair is inherited with a special coordinate system based on its geometrical properties such as a Gaussian surface coordinate system or a Serret Frenet curve coordinate system The formulation in a covariant form allows in a straightforward fashion to consider various constitutive

relations for a certain pair such as anisotropy for both frictional and structural parts Then standard methods well known in computational contact mechanics such as penalty Lagrange multiplier methods combination of both and others are formulated in these coordinate systems Such formulations require then the powerful apparatus of differential geometry of surfaces and curves as well as of convex analysis The final goals of such transformations are then ready for implementation numerical algorithms within the finite element method including any arbitrary discretization techniques such as high order and isogeometric finite elements which are most convenient for the considered geometrical situation The book proposes a consistent study of geometry and kinematics variational formulations constitutive relations for surfaces and discretization techniques for all considered geometrical pairs and contains the associated numerical analysis as well as some new analytical results in contact mechanics

Spatial Reasoning in the Early Years Brent Davis, Spatial Reasoning Study Group, 2015-04-17 Over the past several years spatial reasoning has gained renewed prominence among mathematics educators as spatial skills are proving to be not just essential to mathematical understanding but also strong predictors of future success beyond the classroom in fields such as science technology and engineering By exploring both primary and emergent dimensions *Spatial Reasoning in the Early Years* helps define the concept of spatial reasoning and provides compelling evidence of the need for a clear focus within early education specifically The authors review the research look across current theories and investigate implications for contemporary school mathematics pedagogy as they identify areas of inquiry necessary to bring a stronger spatial reasoning emphasis into the classroom The book contains many classroom or workshop based vignettes highlighting the complexity of spatial reasoning in educational practice providing an in depth analysis of spatial reasoning as it applies to classroom practice and offering new ways of framing lessons to help young students hone their spatial reasoning abilities The book concludes with a forward looking agenda that contributes to developing a greater understanding of the role spatial reasoning plays in educational contexts and beyond Supported by plentiful visual representations *Spatial Reasoning in the Early Years* skillfully integrates the conceptual and the concrete making this text a dynamic and accessible resource
