Why Ai Tools For Students For Workers:

Artificial Intelligence in Educational and Business Ecosystems: Convergent Perspectives on Agency, Ethics, and Transformation Charity M. Dacey, Jasmin Cowin, Joy de los Reyes, 2026-03-13

Artificial Intelligence AI has received a great deal of attention as educational systems have been increasingly affected by rapid technological changes. We invite proposals examining the dynamic interplay between human educators/learners and artificial intelligence systems in contemporary educational spaces. Recent advances in AI have fundamentally altered the educational landscape, creating novel forms of cognitive extension and pedagogical possibility. This transformation demands rigorous transdisciplinary investigation into how AI systems, human actors, and learning environments coalesce into dynamic educational assemblages. We seek contributions that explore these emerging phenomena through multiple theoretical lenses and methodological approaches. As AI systems become increasingly sophisticated, anthropomorphic participants in educational processes, we must reconceptualize traditional frameworks of teaching and learning. This calls for examination of how cognition is distributed across human-AI networks, how agency emerges from these interactions, and how educational spaces are transformed by these new configurations. Critical questions arise about the nature of knowledge construction, the role of embodied experience, and the ethical implications of AI-mediated learning. AI will have an exponential impact on pedagogy, and there are wider implications as well, which may call for thoughtful policy revisions. We are seeking transdisciplinary perspectives to facilitate a fertile dialogue about the transformative impact of AI in education and business, given these fields are uniquely intertwined. Many questions that can be addressed include: How will AI simulations in various disciplines be designed and experienced? How can teachers/faculty be encouraged to embrace gamification without compromising student engagement? What will AI's role be in fundamental learning, communication, and cognitive development of students? Will there be effects on embodied cognition and experiential learning? What are they? How should educational governance units respond to AI integration in education and business environments, and address data privacy issues? What are the ethical challenges of AI in business education, and how can AI be effectively incorporated in creating work force ready business graduates with a foundation in business ethics? How do businesses mitigate the potential for deceptive marketing in a world of AI while maintaining profitability? What are the concerns about potential centralization of power of educational technology companies? In what ways can educational leaders ensure that AI prevents educational inequities and biases rather than fostering them? What is AI's exponential impact on pedagogy? What are the opportunities and possible affordances/frameworks of AI's potential in personalizing learning and enhancing interactive dynamics? What are the risks of diminishing human roles in education? For this article collection, we seek manuscripts with a focus on AI that address some of these questions. We are particularly interested in addressing AI across all three levels of multi-tiered systems of support (MTSS) in terms of academics, social, emotional, and behavioral development. For this Research Topic, we welcome a breadth of research from a wide range of

contexts perspectives and methodological approaches to bring in more possibilities for research on teacher innovative collaborative and ethical classroom AI practices Artificial Intelligence for Academic Libraries Clifford B.

Anderson, Douglas H. Fisher, 2025-07-08 Artificial Intelligence for Academic Libraries provides a clear and dependable guide to the history theory and application of artificial intelligence AI and machine learning ML in academic libraries addressing the needs of librarians staff administrators and other stakeholders Emerging from a long running conversation between an academic librarian and a professor of computer science this book provides readers with a critical perspective on the history present and future of AI in libraries and information services Synthesizing the literature on AI ML and librarianship the authors provide the requisite background to evaluate the impact of these technologies on the information ecosystem The first half of the volume covers the fundamentals of AI notably the divergences between the two major AI paradigms as well as philosophical legal and ethical issues that arise from the use of AI The second half addresses specialized topics including hybrid AIs that bridge the dominant AI paradigms the responsible use of AI in research and learning and suggestions for professional development Artificial Intelligence for Academic Libraries will benefit academic librarians seeking to develop a solid understanding of AI and ML and their likely impact on library operations and services including student and faculty outreach The volume also serves as a pedagogical resource for library and information science students entering this rapidly changing field **Handbook for Highly Effective Teams in a PLC at Work**® William M.
