

Combustion Tutorials

Three types of models have been chosen for combustion tutorials:

- An idealized CAN type gas turbine combustion chamber
- A flame tube
- Methane-on-platinum

These models will familiarize you with STAR-CCM+'s combustion modeling capabilities and introduce various recommended practices for simulating combustor flows.

CAN Type Gas Turbine Combustion Chamber

The problem geometry (shown below) consists of three sets of air inlets placed circumferentially at the combustor head to promote maximum mixing and flame stabilization; swirling air enters the primary combustion zone through the two sets of inlets nearest to the axis of symmetry. Non-swirling air enters the upper inlet and thence the primary, secondary and dilution zones via five injection holes in the baffle.

Air is assumed to be composed of 23.3% oxygen and 76.7% nitrogen, by mass, and its initial pressure and temperature are 1 bar and 293 K, respectively.
