

HOW DOES **DREDGING** WORK?

1

The operator of the dredge **lowers the boom** to the bottom of the body of water.

2

A rotating cutter-bar then uses teeth to **loosen** the settled material, as the submersible pump **removes** the sediment from the bottom of the waterway.

3

The silt and debris are **transported away** for final processing.

THIS PROCESS IS USED FOR

- » creating waterways
- » re-opening channels
- » restoring shorelines
- » maintaining ecosystems
- » gathering construction materials
- » removing trash and debris
- » reconfiguring waterways
- » increasing waterway depth
- » mining for metals
- » and more

Dredging Safety Manual
