

### CHAPTER 3 – CHAPTER REVIEW QUESTIONS

- When educating patients about chronic diseases, such as diabetes, which of the following should the nurse include in the rationale for effective management of the disease? Select all that apply.
  - An unmanaged chronic disease may lead to the development of other chronic illnesses.
  - When a patient is admitted to the ICU with a comorbid chronic disease, that patient faces a greater risk of morbidity and mortality.
  - Although chronic disease affects the entire family system, management of the disease is the patient's sole responsibility.
  - By managing a chronic disorder early in the disease process, the patient may be able to save himself – or herself the high costs associated with the sequel of unmanaged disease.
  - Chronic illness management is not influenced by lifestyle changes.
- A patient is nearing death from metastatic cancer and is receiving hospice care in the home. The home care nurse visits. The patient's family caregiver states that the patient has not eaten well for the last several days and rarely wishes to drink, only sipping on ice now and then. The caregiver thinks that it is cruel to let the dying patient starve to death, or die from dehydration. What would the nurse's best response be?
  - "I think it is cruel, too. If this were my mother, I would not let her die like that."
  - "Tell me why you feel that way?"
  - "It's okay, because this may hasten death and relieve suffering."
  - "This is what happens when people die."
- The sounds of breathing, including terminal bubbling, at the time of death may be distressing for families to hear. When the nurse hears these sounds, she should do which of the following? Select all that apply.
  - Reposition the patient in an attempt to move secretions out of the oropharynx.
  - Educate the family about what they are hearing and that the sound does not mean that the patient is in any distress.
  - Suction the patient deeply and often to rid the oropharynx of the build-up of secretions.
  - Suggest to the provider that now is the time for an anticholinergic drug (such as glycopyrrolate).
- Chronic illnesses are characterized by which of the following? Select all that apply.
  - A nonreversible pathology.
  - A slow, progressive decline in normal physiologic function.
  - A decreasing prevalence nationally and internationally.
  - Necessitating long-term surveillance.
- A dying patient has sudden onset of confusion, waxing and waning consciousness, and loss of orientation, thinking she is at home when she is in the hospital. The nurse recognizes this as \_\_\_\_\_ and knows that the most appropriate pharmacologic treatment for it includes \_\_\_\_\_.
  - Dementia, acetylcholinesterase inhibitor
  - Delirium, benzodiazepine
  - Delirium, haloperidol
  - Dementia, haloperidol

### CHAPTER 6 – CHAPTER REVIEW QUESTIONS

- In assessing the neutropenic patient's understanding of discharge education, which patient statement indicates that the nurse needs to provide further education?
